[METHOD FOR MANAGING SPARE BLOCKS OF AN OPTICAL DISC]

Abstract of Disclosure

A method for defect management of an optical disc. The optical disc includes a plurality of data blocks and a plurality of spare blocks, each data block is for recording data, each spare block is for replacing a defect data block to record a data. The method includesrecording a status of the spare blocks in a status table according to a location order of the spare blocks, such that the statuses of neighboring spare blocks with different statuses are recording in neighboring items of the status table.
